

In order to resolve the issue with Footprints not showing correct EIRP levels we have migrated to Google Maps API V3.

As a result we have just released [Footprints-Beta](#) (available through Menu) where annoying issue is finally resolved. Some functions (like direction to the satellite and user markers) still need to be upgraded and we will do our best to complete this work within the next few days.

On top of fixing the issue API V3 brings better performance and all the maps load significantly faster!

Should you spot any issues with [Footprints-Beta](#) or have any comments regarding the beta functionality do not hesitate to [contact](#) us.
